Sample identification	Sample description

In water samples, the total bacteria number (see table) and the following bacteria are considered:
E. coli, Salmonella, Streptococci and Staphylococci.

IKB-norm		Deviating result
	Enterobacteriaceae	>100 CFU/ml
	Total bacteria count	>100.000 CFU/ml
	Yeasts	> 0 CFU/ml
	Fungi	+ or more
	pH	< 4 and >9

The total bacteria number gives an impression of the general condition of the water.
 In addition, the coliform bacterial number (or better: the Enterobacteriaceae) is determined to detect faecal contamination.

Category 1, samples for diagnosis and examination
